BT BINARY TRADING · TRADER GUIDE

How to trade on Binary Trading

Everything you need to start: your Demo and Live accounts, placing a trade, reading the result, and moving money in and out. It covers both the website and the mobile app; the screens are from the app.

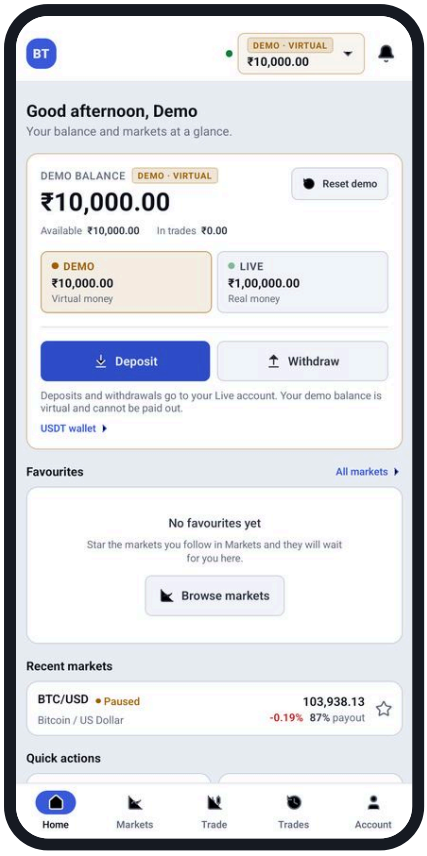

Getting started

1. **Create your account**
   Tap `Try for free` or `Start now`. Enter your email, a username and a password, and accept the Terms and Privacy policy.
2. **Take the short tour**
   A five-step introduction explains how a trade works. You can skip it and replay it later from `Learn`.
3. **Practise on Demo**
   Every new account starts on the Demo account with ₹10,000 of virtual money, so you can learn without risking real money.
4. **Sign in next time**
   Use `Sign in` with your email and password. The app keeps you signed in on your phone until you sign out.

The welcome screen. Sign in, or start with a free Demo account.

The app at a glance

Home: your balance, both accounts, and quick links.

The bar at the bottom takes you to the five main places:

- **Home** shows your balance, favourite markets, recent markets and short guides.
- **Markets** lists every instrument you can trade, with its price, 24-hour change and payout.
- **Trade** is the trading screen: the chart and the ticket you trade from.
- **Trades** lists your running trades and your history. A badge shows how many are running.
- **Account** holds your profile, wallet, deposits and withdrawals, settings, notifications and support.

The top bar always shows your balance and which account it belongs to. Tap it to switch account, see what is available and what is held in open trades, or to deposit and withdraw. The small dot beside it is green while live prices are connected. The bell shows new notifications.

Demo and Live accounts

You have two accounts and they work the same way. Only the money is different.

	DEMO	LIVE
Money	Virtual, starts at ₹10,000	Real money you deposit
Marked as	`DEMO · VIRTUAL` in yellow	`LIVE`
Deposits and withdrawals	Not possible	Yes
Top up	`Reset demo` refills it to ₹10,000	Deposit

Switch account from the balance in the top bar, or from the Demo and Live cards on Home. Every trade is placed on the account that is selected at that moment, so check the marker before you trade.

You can reset the Demo balance at any time except while a Demo trade is still running; wait for it to finish first.

Tip. If you tap Deposit or Withdraw while on Demo, the app switches you to Live first and tells you so. Money only ever moves in and out of the Live account.

Choosing a market

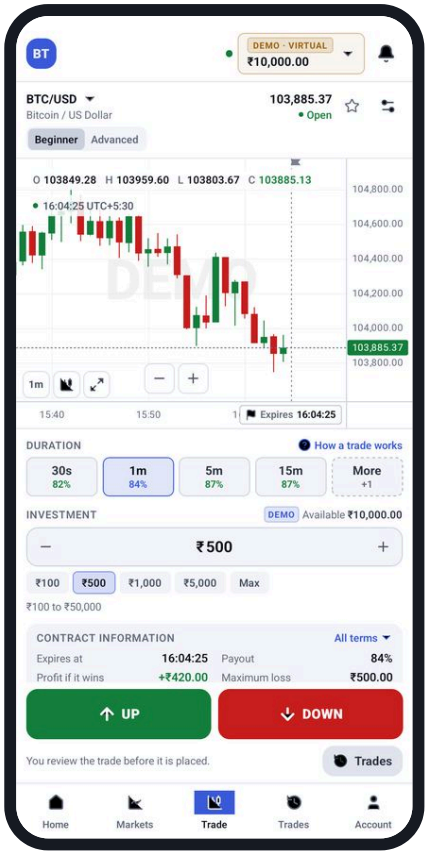

Open **Markets** to see everything you can trade: crypto, forex and gold. Search by name or symbol, filter by category, and change the sort order.

- **Status**: `Open` means you can trade now. `Paused` means prices are not arriving reliably, so new trades are stopped for a moment. `Market closed` shows when it opens next.
- **Payout**: the best payout percentage the market offers. The exact figure depends on the duration you pick.
- **Star**: tap it to add a market to your favourites on Home. Favourites follow your account to other devices.

Tap a market to open it on the Trade screen. On the Trade screen, tap the market name at the top to switch to another one.

Placing a trade

A trade is a simple question: **will the price be higher or lower when the time runs out?** You choose the time and the amount, then pick a direction.

The Trade screen: chart on top, the ticket below.

1. **Pick the market**
   Check the name at the top of the Trade screen and that it says `Open`.
2. **Choose a duration**
   Tap 30s, 1m, 5m or 15m, or `More` for other choices. Each one shows its payout.
3. **Set your investment**
   Use – and +, type an amount, or tap a preset (₹100, ₹500, ₹1,000, ₹5,000 or Max). The allowed range is shown under the amount.
4. **Read the contract**
   Under `Contract information` you see when it expires, the payout, the profit if it wins and the maximum loss.
5. **Tap UP or DOWN**
   UP if you think the price will finish higher, DOWN if lower.
6. **Confirm**
   A summary opens. Check it and tap Confirm, or Edit to change something. You can turn this step off in Settings for one-tap trading.

An example

`BTC/USD · UP · 1 MINUTE`

Investment	₹500.00
Payout	84%
Profit if it wins	+₹420.00
Maximum loss	₹500.00

PRICE ENDS HIGHER

+₹420

You win. ₹920 comes back to your balance: your ₹500 plus ₹420 profit.

PRICE ENDS LOWER

-₹500

You lose the amount you invested. You can never lose more than that.

PRICE ENDS EXACTLY EQUAL

₹0

A draw. Your ₹500 is refunded. The ticket tells you how a draw settles on each market.

The platform records the entry price and the start and end times at the moment it accepts your trade. If the price moves a lot between your tap and that moment, you are asked whether to place it at the new price instead.

A trade may be refused, with the reason shown, if the market is paused or closed, the amount is outside the allowed range, your available balance is too low, or live prices are reconnecting.

While a trade is running

- The chart marks where you entered, shows your amount, and draws a line where the trade ends.
- Tap `Trades` under the ticket to see your running trades, each with a countdown.
- Each one shows `If it ends now: +₹82.00 · winning`. This is an estimate from the current price, not the final result.
- The money for a running trade is held, so it shows under **In open trades** and is not part of your available balance until the trade ends.

Sell now (close early)

You can close a running trade before it ends. `Sell now` shows what you would get right now; the offer updates every couple of seconds as the price moves. A trade that is winning is offered close to its full payout, and one that is losing is offered much less. A small fee is included in the offer.

Sell now is not available in the last few seconds before a trade ends. A closed trade appears in your history as `Sold early`.

Results and history

When a trade ends, a result card appears with the outcome and the amount. It stays until you close it, so you will not miss it. Your balance updates straight away.

RESULT	WHAT IT MEANS
Won	Your direction was right. You get your investment back plus the profit.
Lost	Your direction was wrong. The investment is lost.
Draw · refunded	The end price was exactly the entry price. The investment is returned.
Sold early	You closed it with Sell now. You received the amount offered at that moment.
Active / Settling	Still running, or just ended and being worked out.

The **Trades** tab has two lists: **Active** and **History**. In History you can filter by market, direction, account and dates, see your totals (invested, won, lost, net result), and export the list as a CSV file. Tap a trade to see its full details, including a small chart of the price during the trade.

Using the chart

- **Move around**: drag to scroll back in time, pinch to zoom, or use the − and + buttons. Long-press to see the exact price and time at a point. The chart follows the live price again when you return to the newest candle.
- **Timeframe**: the button at the bottom left (for example `1m`) sets how much time each candle covers, from 5 seconds to 1 day.
- **Chart type**: candles, bars, line or area.
- **Full screen**: the expand button opens the chart across the whole screen.
- **Expiry line**: before you trade, a flag shows exactly where a trade placed now would end.

Beginner and Advanced

Switch at the top of the Trade screen. **Beginner** keeps the chart simple. **Advanced** adds market tabs, indicators (moving averages, Bollinger Bands, RSI, MACD and Stochastic) and drawing tools such as trend lines, horizontal levels, rectangles and Fibonacci levels. Your drawings are saved per market on your device.

Indicators and drawings are only there to help you read the chart. They never change your trades.

Deposit money

Deposits go to your Live account. You pay from your own bank or UPI app, then tell the platform about the payment so the team can check it.

1. **Open Deposit**
   From the balance menu, Home or Account.
2. **Pick a payment method**
   The screen shows the UPI ID or bank details to pay to. Use the copy buttons rather than typing them, so nothing is mistyped.
3. **Pay from your bank or UPI app**
   Pay the exact amount you want to deposit.
4. **Submit the details**
   Enter the amount and the
   UTR
   (the transaction reference your bank shows), and attach a screenshot of the payment if you have one. You need at least one of the two.
5. **Wait for approval**
   The deposit shows as `Pending` while the team matches it with the bank statement. Once approved, the money is added to your Live balance.

Nothing is added to your balance until the deposit is approved. If it is rejected, the reason is shown. Screenshots can be PNG, JPEG or WebP, up to 5 MB. Each payment method shows its own minimum and maximum amount.

Keep your UTR. Each payment can be claimed only once, so the same UTR cannot be used twice.

Withdraw money

1. **Open Withdraw**
   From the balance menu, Home or Account.
2. **Enter the amount**
   It must be within your available Live balance.
3. **Choose where to receive it**
   Either a UPI ID (like `name@bank`) or a bank account with the account holder's name, account number and IFSC code.
4. **Submit**
   The amount is set aside from your balance straight away, so it cannot be used for trading while it waits.
5. **Get paid**
   The team sends the money to you and marks the withdrawal complete with the payment reference. If it is rejected, the amount goes back to your balance and the reason is shown.

Account and settings

- **Profile**: your name, username, phone, country, date of birth and address.
- **Security**: change your password.
- **Funds and transactions**: your balances and every movement of money on your account.
- **Notifications**: updates about deposits, withdrawals and your account. The bell in the top bar opens them.
- **Theme**: Light, Twilight, Full night, or System to follow your phone.
- **Trading preferences**: confirm before each trade or trade with one tap, your default amount and duration, sound, and Beginner or Advanced mode.

- **Chart settings**: the gear on the Trade screen. Grid strength, up and down colours, auto-scroll, order labels and your time zone. The time zone only changes how times are shown; expiry times are never moved.

Getting help

Open **Account** → **Support** to chat with the support team. You can see when an agent is typing, and the Account tab shows a red badge when you have an unread reply. Your conversation stays in one place, so you can come back to it later.

Learn (on Home) has short guides: how a trade works, durations and expiry, payout and return, your maximum loss, selling early, Demo and Live, deposits and withdrawals, and risk.

Frequently asked questions

▼ Can I lose more than I invest?

No. The most you can lose on a trade is the amount you invested in it, and the ticket shows it as Maximum loss before you trade.

▼ Why is the UP or DOWN button disabled?

Trading is blocked when the market is paused or closed, live prices are reconnecting, the amount is outside the allowed range, or your available balance is too low. The reason is shown above the buttons.

▼ Why did my payout change?

Payout depends on the market and the duration. Changing the duration changes the payout. The figure on the ticket when you confirm is the one your trade uses.

▼ My deposit is still pending. What should I do?

Deposits are checked by hand against the bank statement. Make sure you entered the correct UTR or attached a clear screenshot. If it takes too long, message Support with the deposit reference.

▼ Where does my withdrawn amount go while I wait?

It is set aside from your balance as soon as you submit. If the withdrawal is rejected, it comes back to your balance.

▼ Is the Demo money real?

No. Demo money is virtual and cannot be withdrawn. It is for practice, and you can reset it to ₹10,000 whenever no Demo trade is running.

▼ Does the app keep me signed in?

Yes, until you sign out. To sign out, tap your balance in the top bar and choose Sign out, or use Account.

Terms you will see

TERM	MEANING
Investment	The amount you put on a trade.
Duration / Expiry	How long the trade runs, and the exact time it ends.
Entry price	The price when your trade was accepted.
Payout	The profit you make on a win, as a percentage of your investment.
Profit if it wins	Investment × payout. On ₹500 at 84% that is ₹420.
Draw	The trade ended exactly at the entry price.
Sell now	Closing a running trade early for the amount offered.
Available / In open trades	Money you can use now, and money held by running trades or pending withdrawals.
UTR	The unique reference number of a bank or UPI payment.

Risk warning

Binary options are high-risk. You can lose the whole amount you invest in a trade, and many traders lose money. Only trade with money you can afford to lose, practise on the Demo account first, and check whether this kind of trading is permitted where you live.

Never share your password with anyone, including people who say they are from support.
